3800 Gateway Centre Boulevard • Suite 308 • Morrisville, NC 27560 • (919) 465-2236 • FAX (919) 465-0153

Dear Denise,

Sicel Technologies would like to thank you for your continued efforts in making our products one of the best in its field. I wanted to take a moment of your time to stress the importance of the product/service you provide to Sicel Technologies and our customers. Cancer directly or indirectly touches the lives of 1 of 3 people. What we do together can positively touch someone you know.

Sicel's wireless sensors provide a "window into the body" so doctors can gain the kind of data they need to increase treatment success rates. In the battle against cancer, one of the most powerful weapons in your arsenal is knowledge. Sicel Technologies' products including OneDose™ and DVS ® verification systems provide this knowledge. To summarize our product offerings:

OneDose™ is a single use small, disposable external adhesive patch that verifies the radiation dose giving during radiation therapy. The OneDose system enables the treatment administrator to maintain quality control by checking the treatment plans and compare it to the actual radiation dose administered.

DVS ® is the first and only implantable dosimeter that provides verification of daily radiation dose delivered to the tumor site. By monitoring daily dose measurements the treatment administrator is alerted to random or systematic variations that can have a profound impact on the tumor control and damage health surrounding tissues.

For more information, please refer to <http://www.dvssmartmarker.com> or <http://www.siceltech.com>.

Mr. Bud Hirsch is one of the early patients who used the DVS system as part of his prostate cancer treatment. He traveled a long way for his daily treatments over a six week period to gain the benefits of knowing the treatment was on plan. After a tour of our production facility, Mr. Hirsch wrote: "To learn of the manufacturing process was eye opening. To become aware of the skill sets needed to produce, market and sustain interest in development was enlightening. To witness, in a small way, the clear focus, diligence and QC concerns toward the end product makes me feel respectful as one of your customers." Mr. Hirsch has completed his treatment plan and, now 89 years old, is traveling to England and Tunisia this winter because he "still has a lot of living to do".

Doctors can help millions of future survivors with their battle with cancer through your diligence, quality of work and attention to detail. Please continue to help us help cancer patients become survivors, you all help to earn their respect.

We have enclosed a 2009 calendar to show our appreciation for your efforts. Please distribute them to your associates on our behalf. We would like to remind them of the importance of the work they do for our customers.

Sincerely the Sicel Technologies team.

Paul McDaniel
Executive Vice President of Operations and Quality
